Coding Interview for Graduates

Coding Challenge

Using https://api.publicapis.org/ complete the following tasks in any language/server.

- 1. Create an API that lists the title, description based on the category passed as an input parameter.
- 2. Create an API that would save a new entry with all the relevant properties which retrieves values from the endpoint GET /entries.
- 3. Question: what are the key things you would consider when creating/consuming an API to ensure that it is secure and reliable?

Theoretical Challenge

Suppose you have a CSV file with the data below.

This can be represented in an excel sheet below:

	A	В	С
1	5	3	=5+A1
2	7	8	=A2+B2
3	9	=4+5	=C2+B3

I want a program that will take the CSV input above and produce CSV output with the results. If it is a value, then return a value. If it is a formula then calculate the formula and return the value of that formula.

- 1. How will you tackle the challenge above?
- 2. What type of errors you would you check for?
- 3. How might a user break your code?
